

Ex 3.2

Q1

outcome	Prob	$x \times P$
12	$\frac{1}{2}$	6
10	$\frac{1}{4}$	2.5
6	$\frac{1}{4}$	1.5
		<u>10</u>

$$E(x) = 10.$$

Q2

outcome	Prob	$x \times P$
2	$\frac{2}{6} = \frac{1}{3}$	$\frac{2}{3}$
6	$\frac{1}{6}$	1
8	$\frac{1}{6}$	$\frac{8}{6} = \frac{4}{3}$
9	$\frac{1}{6}$	$\frac{9}{6} = \frac{3}{2}$
12	$\frac{1}{6}$	2
		<u><math>\frac{13}{2} = 6.5</math></u>

Q6

$$E(x) = (0 \times 0.21) + (1 \times 0.37) + (2 \times 0.25) + (3 \times 0.13) \\ + (4 \times 0.03) + (5 \times 0.01)$$

$$= 0.37 + 0.5 + 0.39 + 0.12 + 0.05$$

$$= 1.43.$$

Q8

outcome	P	$P \times x$
20	$\frac{1}{2}$	10
10	$\frac{1}{6}$	$\frac{10}{6}$
5	$\frac{1}{3}$	$\frac{5}{3}$

$$\sum x_i P(x_i) = \frac{40}{3} = 13.33$$

$$13.33 - 10 = 3.33$$

Expect to win €3.33

It is not fair as mathematical expectation  $\neq 0$ .

Q9

outcome	P	$x \times P$
(1) €10	$\frac{1}{6}$	$\frac{10}{6}$
(2) €10	$\frac{1}{6}$	$\frac{10}{6}$
(3) -€5	$\frac{1}{6}$	$-\frac{5}{6}$
(4) -€5	$\frac{1}{6}$	$-\frac{5}{6}$
(5) -€5	$\frac{1}{6}$	$-\frac{5}{6}$
(6) -€5	$\frac{1}{6}$	$-\frac{5}{6}$

$$\sum x_i P(x_i) = 0$$

Yes game is fair as expected amount is zero.

Q.11  $P(\text{Dying}) = \frac{1}{1000} = 0.001$

$$P(\text{Disability}) = \frac{3}{1000} = 0.003$$

$$(0.001)(50,000) + (0.003)(20,000)$$

$$= 50 + 60$$

$\approx 110$ . is expected payout

$$\text{Profit} = 300 - 110 = \text{€}190 \text{ per customer.}$$

Q.13

Outcomes	P	$x \times P$
(1) <del>€15</del>	$\frac{1}{6}$	$-\frac{15}{6}$
(2) €20	$\frac{1}{6}$	$\frac{20}{6}$
(3) 0	$\frac{1}{6}$	0
(4) 0	$\frac{1}{6}$	0
(5) 0	$\frac{1}{6}$	0
(6) €20	$\frac{1}{6}$	$\frac{20}{6}$

$$\sum x \cdot P(x) = \frac{25}{6} = \text{€}4.17$$

$$\text{Cost} = \text{€}5$$

$$\Rightarrow 5 - 4.17 = 0.83 \text{ expected Winnings}$$

play 20 Times

$$\Rightarrow 20 \times 0.83 = \text{€}16.67$$

Ex 3.2 (Text + Test 5)

Q 14

(i)  $0.1 + p + 0.3 + q + 0.2 = 1$

$$p + q = 1 - 0.6$$

(A)  $p + q = 0.4$

$$(1)(0.1) + (2)(p) + (3)(0.3) + (4)(q) + (5)(0.2) = 3$$

$$0.1 + 2p + 0.9 + 4q + 1 = 3$$

$$2p + 4q = 3 - 2$$

(B)  $2p + 4q = 1$

(ii) (2A)  $\ominus 2p + \ominus 2q = \ominus 0.8$

$$2p + 4q = 1$$

$$2q = 0.2$$

$$q = 0.1$$

$$p + 0.1 = 0.4$$

$$p = 0.3$$

Q15

(i) <sup>Rural</sup>  $\frac{210}{4600} = 0.0456$

(ii) Expected Value =  $x \cdot P(x)$   
 $(1705)(0.0456) = €77.836$   
 $= €77.84$

(iii) Urban 6250 households pay 580  
480 claims of 2840

$$\begin{array}{r} 6250 \times 580 = 3625000 \text{ Payed} \\ 480 \times 2840 = 1363200 \text{ Claims} \\ \hline 2261800 \text{ Profit} \end{array}$$

$$\text{Profit Per household} = \frac{2261800}{6250} = 361.89$$

(iv)  $P(\text{Claim}) = 0.05$

$$(1550)(0.05) = 77.50$$

Profit of 350

$$\Rightarrow \text{Premium} = 350 + 77.50$$
$$= €427.50$$

Q16

Section A

$$P(A) = \frac{1}{4} \quad P(B) = \frac{1}{4} \quad P(C) = \frac{1}{4} \quad P(D) = \frac{1}{4}$$

$$20 \text{ Q's} \Rightarrow \text{Expected N}^\circ \text{ of Correct} \\ = 20 \times \frac{1}{4} = 5.$$

Section B True or False  $\Rightarrow P(\text{Correct}) = \frac{1}{2}$

$$10 \text{ Q's} \Rightarrow \text{Expected N}^\circ \text{ Correct} \\ = 10 \times \frac{1}{2} = 5$$

Section 3 A, B, or C  $\Rightarrow P(\text{Correct}) = \frac{1}{3}$

$$10 \text{ Q's} \Rightarrow \text{Expected N}^\circ \text{ Correct} \\ = 10 \times \frac{1}{3} = 3\frac{1}{3}$$

$$\therefore \text{Total Correct} = 5 + 5 + 3\frac{1}{3} \\ = 13\frac{1}{3}$$

Q17

Table 1

52 cards

Outcome	P	$x \times P$
Heart (30)	$\frac{1}{4}$	$\frac{30}{4}$
Other (-5)	$\frac{3}{4}$	$-\frac{15}{4}$

$$\sum x \cdot P(x) = \frac{15}{4} = 3.75$$

Costs €10

$$\therefore \text{Expected Value: } 3.75 - 10 = -6.25 (\text{loss})$$

Table 2

Outcome	P	$x \times P$
(10) €50	$\frac{3}{36}$	$\frac{150}{36}$
(11) €50	$\frac{2}{36}$	$\frac{100}{36}$
(12) €50	$\frac{1}{36}$	$\frac{50}{36}$
(Other) -2	$\frac{30}{36}$	$-\frac{60}{36}$

$$\sum x \cdot P(x) = \frac{240}{36} = 6.67$$

$$\therefore \text{Expected Value: } 6.67 - 10 = -3.33 (\text{loss})$$

Better Return on Table 2. Loss €3.33 on average  
Whereas Table 1 loss €6.25 on average

Difference between the two

$$6.25 - 3.33 = \text{€}2.92$$
